American Water Works Association (AWWA)

Chi Epsilon (Civil Engineering Society)

Society of Women Engineers

Christine joined Tank Industry Consultants after nearly eleven years with Fisher Tank Company, a well-respected manufacturer of field-erected welded steel storage tanks for the water, chemical, and petroleum industries. While at Fisher Tank, Christine’s responsibilities included Sales and Marketing, Estimating and Design, and Project Management. She reviewed bid specifications and estimated costs for new tank construction and repairs valued up to \$4 million, responded to customer’s technical questions and budget requests, and performed site inspections of tanks to determine required repairs. Christine also designed welded steel tanks (5,000 to 15 million gallons), accessories, and repairs in accordance with the American Water Works Association (AWWA) and American Petroleum Institute (API) standards, and was in charge of scheduling and preparing submittals in accordance with contract requirements.

Christine’s experience in the steel tank industry is invaluable in her position as Manager of TIC’s East Coast projects. In this capacity, Christine serves as client liaison in the development and execution of tank rehabilitation and new tank construction projects—both water and industrial. Her intimate familiarity with tank construction and repair procedures, standards, and recognized industry practices helps assure smooth-running, quality projects that are on schedule and within budget. Significant expertise on both the engineering and constructor sides gives her great insight into the total tank project, and allows her to troubleshoot potential problems quickly in order to achieve solutions that are in the best interest of Tank Industry Consultants’ clients.
